Hitachi High-Tech Corporation — Global Cloud ERP Modernization

Executive Briefing Memorandum (Report Precis)

TO:	Hitachi High-Tech Executive Steering Committee & Project Sponsors
FROM:	Lead SAP Functional & Business Process Consultant
DATE:	October 2026 / Project Kickoff
SUBJECT:	Initial Engagement Strategy: Global Cloud ERP & Clean Core Modernization

As you prepare to kick off your enterprise modernization, this project marks a pivotal turning point in Hitachi High-Tech Corporation's illustrious history. For thirty years, your legacy SAP ERP backbone supported remarkable global growth; however, an accumulation of approximately 9,000 custom add-ons has created severe architectural calcification, hindering operational agility across your 26 operating countries. By undertaking this greenfield transformation—anchored by SAP S/4HANA Cloud (Two-Tier Edition), SAP Business Technology Platform (BTP), and SAP Analytics Cloud (SAC)—you are strategically positioning your enterprise to dominate the evolving semiconductor and medical diagnostics industries.

Our engagement strategy focuses on three transformative business outcomes:
1. Slashing Total Cost of Ownership (TCO): Slashing your custom-code footprint by an extraordinary 94% (reducing ~9,000 add-ons down to fewer than 800 standard/BTP-hosted extensions) by adopting a strict Fit-to-Standard delivery ethos.
2. Accelerating Global Agility: Compressing new subsidiary onboarding cycles and localized market rollouts from 12 months down to under 8 weeks through standard APIs and S/4HANA Cloud Public Edition subsidiary deployments.
3. Establishing Real-Time Operational Intelligence: Powering instantaneous global decision-making through SAC live-data connectivity across global manufacturing lines, supply chain hubs, and field service networks.

During the upcoming Discovery and Explore phases, our engagement team will employ two complementary analysis frameworks: PESTLE Analysis to navigate geopolitical semiconductor mandates and regional healthcare regulations (FDA/IVDR), and Design Thinking to empathize with your business users, rapidly co-design intuitive SAP Fiori workflows, and overcome change resistance.

Our collaborative project team pairs specialized SAP consulting capabilities (Functional Leadership, BTP Architecture, SAC Data Modeling, OCM, and Activate Project Management) with your dedicated Business Process Owners (BPOs). Supported by a formal Clean Core Governance Board, we ensure your investments yield rapid time-to-value while preserving architectural integrity.

We welcome you to this transformational partnership and look forward to executing a successful Prepare phase kickoff.
